24 Hour Order Desk: (800) 274-4666
Fax (800) 289-0301

We are located in a 50,000 square foot building in Santa Clarita, CA. Miles of shelving are arranged for immediate identification of and easy accessibility to the over 250,000 different parts available.

Maintaining an inventory of this size has been the cornerstone of our success as the OEM parts distribution industry leader. It provides us with an average first pass fill rate of above 90% and makes us

the largest supplier in America for the manufacturers that we represent. Our fill rate is calculated on not only everything that is ordered but also on every call or fax that we receive for availability, even if it isn't ordered! Our dealer order desk has 32 available sales representatives to handle all of your ordering needs.

An in-house computer system, with custom-designed programs to suit the firm's special needs, keeps track of all inventory and accounting records. Each employee has a separate terminal with its own display and keyboard, so that all necessary information is literally at everyone's fingertips.

Extensive cross-referencing from make/model number to part number and from parts descriptions to specific parts identification is maintained in the computer. A separate room houses a vast research library, stocked with service literature and manuals, catalogs, cross-referenced data, etc. Many sources are used, from printed form to microfiche, as well as notes compiled over the years by Andrews personnel.

The same management principles which opened the company's doors in 1950 are still guiding it today. Andrews Electronics pioneered a computerized system of controlling and up-dating inventory and order processing which gained the reputation of the "stockingest" distributor around.

Andrews is one of the old-timers in a relatively young field, a wholesaler whose seasoned staff has combined old-fashioned principles with innovative and fresh ideas along with the latest in technology.

Now there's a definite difference !!
